Customer Reviews

Roger Tory Peterson, one of the world's greatest naturalists, received every major award for ornithology, natural science, and conservation, as well as numerous honorary degrees, medals, and citations, including the Presidential Medal of Freedom. The Peterson Identification System has been called the greatest invention since binoculars, and the Peterson Field Guides[®] are credited with helping to set the stage for the environmental movement.

I bought this edition on recommendation that it was more complete and easier to use than more recent edition. I can't compare them, but am very satisfied with this reference guide. Got it for looking at amphibians. I'm a total amateur. It's fun to look through. I'll probably need to find another book for more in depth information. Great place to start out and identify what you may see in the field. Many illustrations with descriptions and color photos in center of book.

Interesting. I like to learn more about the lizards in my area.

This is a great guide for the field or home use. Broken into 3 parts: Detailed description, Color plates, and maps. I went through the color plates and highlighted the species that are found in my area and now i can see them at a glance without looking through the maps. I will be purchasing more guides from this series.

Quick delivery. Nice. Thank you for a clean transaction. Book is in good shape.
