Misty E. Vermaat has more than 25 years of experience in the field of computer and information technology. In addition to consulting in the field, she was an Associate Professor at Purdue University Calumet, teaching or developing Microsoft Office, computer concepts, database management, systems analysis and design, and programming courses. Since 1990, Ms. Vermaat has led the development of the Shelly Cashman Series and has written or co-authored numerous Series textbooks, including many editions of DISCOVERING COMPUTERS, DISCOVERING COMPUTERS FUNDAMENTALS, and Microsoft Word books.

Needed for a class. As far as textbooks go, this one feels incredibly over-comprehensive. I suppose the idea is that it's assuming you have literally never seen a computer before, but as someone who grew up with them....a lot of the explanations seem completely unnecessary to me. Which of course,

makes the book way to big and heavy. It's unpleasant to lug around. But homework assignments are relatively easy.

I used this book for a class, and it's just "okay". Truly, it's not a "readable" book. It's more of the type of book that you use just as a guide when looking up stuff. The big disappointment was the price. When I used this book, it was WAY too expensive. Had it been written better, I might have kept it for future reference. However, I was happy to be done with the book by the end of the course.

Needed this for my online course. Even though the book is offered through the course. Love the hands on information that it brings to the table.

I would recommend this "step-by-step operations manual" to everyone that has a computer. It is by far the best guide to Microsoft Software Applications EVER !!!!!

Wonderful. Very convenient.

Bought this for my son for an online class. Arrived on time and as described.

Good for school. Fast delivery.

Everything in the book can be searched online.
